

**Solve each problem.**

- 1) Henry was trying to beat his old score of thirty-four points in a video game. If he scores exactly three points each round, how many rounds would he need to play to beat his old score?
  
- 2) A box of cupcakes cost \$four. If you had twenty-three dollars and bought as many boxes as you could, how much money would you have left?
  
- 3) A food company has thirty-seven kilograms of food to put into boxes. If each box gets exactly six kilograms, how many full boxes will they have?
  
- 4) It takes five apples to make an apple pie. If a chef bought twenty-two apples, the last pie would need how many more apples?
  
- 5) A container can hold three orange slices. If a company had twenty-two orange slices to put into containers, how many more slices would they need to fill up the last container?
  
- 6) A coat factory had forty-four coats. If they wanted to put them into seven boxes, with the same number of coats in each box, how many extra coats would they have left over?
