

Name:

Let's talk about a cool little creature, the green anole! This tiny lizard is a brilliant green color, but did you know it can change its color to brown too? They have a long tail, and males have a neat pink throat fan called a dewlap, which they show off to attract females or scare away other males. Isn't it amazing how these little guys are so colorful and interesting?

Speaking of colorful and interesting, let's explore the world of green anoles. Green anoles are native to North America, living mostly in the southeastern United States, and they love hanging out in trees and shrubs. Their diet mainly consists of insects, like crickets, roaches, and mealworms, and they drink by licking dew or rain off of leaves. Nature is their supermarket, isn't it?

From their supermarket in nature, let's move on to their relationship with other creatures. Green anoles are quite peaceful and prefer to avoid conflict, but they will defend their territory from other males. With humans, they can be quite shy at first, but with time and patience, they can become comfortable and even eat out of a person's hand. Green anoles also play an important role in the ecosystem by controlling insect populations.

Now that we've seen how they interact, let's compare green anoles to other species. Unlike some lizards, green anoles can change their color based on their mood, temperature, and health. Their life cycle is also fascinating, with females laying single eggs every couple of weeks in the warm months, which hatch into little lizards after about a month or two. So, to wrap it up, green anoles are amazing creatures with their colorchanging abilities, interesting diet, and important role in the ecosystem.

Solve each problem. Use the article to answer the question. 1) How do green anoles behave around humans? A. They always remain shy B. They are always comfortable C. They are shy at first, but can become D. They are aggressive comfortable with time 2) What is unique about green anoles compared to some other lizards? A. They can live underwater B. They can lose and regrow their tail C. They can change their color D. They can glide with flaps under their arms 3) How do green anoles drink water? A. They absorb it through their skin B. They lick dew or rain off of leaves C. They get it from the food they eat D. They drink from streams 4) What do green anoles mostly eat? A. Plants and fruits B. Seeds and nuts C. Small animals like mice and birds D. Insects 5) How do green anoles react when they are faced with other males that are intruding their territory? A. They defend their territory B. They ignore them C. They leave their territory D. They invite them to share their territory 6) What do male green anoles use to attract females? A. A throat fan called dewlap B. Their long tail C. Their green color D. Their ability to climb trees 7) Where do green anoles primarily live? A. In the southeastern United States B. In the northeastern United States C. In desert areas D. In the Southwestern United States 8) Where do green anoles usually live? A. In sandy deserts. B. In trees and shrubs. C. In water bodies. D. In caves. 9) What color is the dewlap? A. Yellow B. Red C. Pink D. Green 10) How often do female green anoles lay eggs in the warm months? A. Once a year B. Every couple of weeks D. Once a month C. Every day
