Imagine a moth as big as your hand, with wings that look like an elephant's skin! That's the elephant hawk moth, a dazzling insect with large, olive-brown wings that resemble the rough texture of an elephant's hide. This moth also has bright pink stripes that make it one of the most colorful creatures you'll ever see in your garden! And guess what, it's not just big and beautiful; it's also a master of disguise, able to blend in perfectly with leaves and twigs.

Speaking of gardens, these flying wonders are usually found in places with lots of plants. Elephant hawk moths love to live in meadows, gardens, and woodland areas, especially in the United Kingdom. But these aren't the only places you can find them; they also pop up in parts of Asia and all across Europe. Wherever they are, they're busy sipping nectar from flowers with their long tongues, much like a hummingbird!

Remember the nectar that these moths love so much? Well, it's not their only food; their caterpillars are big fans of willowherbs and bedstraws. These munching machines transform into pupae during the winter, and when spring arrives, they emerge as the spectacular elephant hawk moths we know and love. And while they're mostly harmless to humans, they can give a nasty surprise to any unsuspecting predator with a sudden flash of their bright colors.

You might be wondering how these moths are different from others, right? Well, apart from their unique looks and large size, elephant hawk moths are also unusual because they're nocturnal, which means they are most active at night. They also have an exceptional ability to see colors even in the dark, something most other moths can't do. So, from their elephant-like textures to their hummingbird-like dining habits, it's clear that the elephant hawk moth is one truly remarkable creature!

Elephant Hawk Moth

Solve each problem.

Use the article to answer the question. 1) What is the color of the stripes on the elephant hawk moth? A. Red A. Red B. Yellow C. Pink D. Blue 2) What color are the elephant hawk moth's wings? A. Dark pink A. Dark pink B. Olive-brown C. Brick-red D. Light blue 3) Where can you NOT find the elephant hawk moth? A. Asia A. Asia B. Antarctica C. United Kingdom D. Europe 4) What is unique about the elephant hawk moth's night vision compared to other moths? A. They can only see blue and green at night B. They can't see at night at all night C. Imagine a moth as big as your hand, with wings that look like an elephant's skin! That's the elephant hawk moth, a dazzling insect with large, olive-brown wings that resemble the rough texture of an elephant's hide. This moth also has bright pink stripes that make it one of the most colorful creatures you'll ever see in your garden! And guess what, it's not just big and beautiful; it's also a master of disguise, able to blend in perfectly with leaves and twigs.

Speaking of gardens, these flying wonders are usually found in places with lots of plants. Elephant hawk moths love to live in meadows, gardens, and woodland areas, especially in the United Kingdom. But these aren't the only places you can find them; they also pop up in parts of Asia and all across Europe. Wherever they are, they're busy sipping nectar from flowers with their long tongues, much like a hummingbird!

Remember the nectar that these moths love so much? Well, it's not their only food; their caterpillars are big fans of willowherbs and bedstraws. These munching machines transform into pupae during the winter, and when spring arrives, they emerge as the spectacular elephant hawk moths we know and love. And while they're mostly harmless to humans, they can give a nasty surprise to any unsuspecting predator with a sudden flash of their bright colors.

You might be wondering how these moths are different from others, right? Well, apart from their unique looks and large size, elephant hawk moths are also unusual because they're nocturnal, which means they are most active at night. They also have an exceptional ability to see colors even in the dark, something most other moths can't do. So, from their elephant-like textures to their hummingbird-like dining habits, it's clear that the elephant hawk moth is one truly remarkable creature!

Solve each problem.

301 V	e each problem.					
Use	the article to answer the question.					
1)	What is the color of the stripes on the elephant hawk moth?					
	A. Red	В.	Yellow			
	C. Pink	D.	Blue			
2)	What color are the elephant hawk moth's win	igs?				
	A. Dark pink		Olive-brown			
	C. Brick-red	D.	Light blue			
3)	Where can you NOT find the elephant hawk	mot	h?			
- /	A. Asia		Antarctica			
	C. United Kingdom	D.	Europe			
4)	What is unique about the elephant hawk moth	h's n	ight vision compared to other moths?			
,	A. They can only see blue and green at night		They can't see at night at all			
	C. They can see colors even in the dark	D.	They can only see black and white at night			
5)	What time of day are elephant hawk moths n	nost	active?			
	A. Night	B.	Dawn			
	C. Day	D.	Dusk			
6)	Where can you normally find the elephant ha	wk	moth?			
	A. In seas and oceans	B.	In arctic areas			
	C. In places with lots of plants	D.	In deserts			
7)	When do the caterpillars of the moth transfor	m ir	nto pupae?			
	A. During the winter	B.	In spring			
	C. During the summer	D.	In the fall			
8)	What do elephant hawk moths usually eat?					
	A. Leaves and twigs	B.	Seeds and grains			
	C. Meat from other insects	D.	Nectar from flowers			
9)	If you were looking for an elephant hawk moto look?	oth ii	n the wild, where would be the best place			
	A. In a meadow	B.	In the ocean			
	C. In the rainforest	D.	In the desert			
10)	How do the elephant hawk moths protect the	mse	lves from predators?			
	A. By making loud noises		By releasing a bad smell			
	C. By playing dead		With a sudden flash of their bright			
			colors			

Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).
