

**Determine which choice shows the expression used to solve the problem.****Answers**

- 1) Victor had two action figures on a shelf in his room. Later he added eight more figures to the shelf. How many action figures were on his shelf total?  
A.  $2 + 8$                       B.  $8 - 2$                       C.  $2 \times 8$                       D.  $8 \div 2$
- 2) A pet store had fifteen siamese cats. If they sold six of them, how many cats did they still have?  
A.  $15 + 6$                       B.  $15 - 6$                       C.  $15 \times 6$                       D.  $15 \div 6$
- 3) Oliver could fit three action figures on each shelf in his room. His room has eight shelves. How many action figures total could his shelves hold?  
A.  $3 + 8$                       B.  $8 - 3$                       C.  $3 \times 8$                       D.  $8 \div 3$
- 4) George was yard sale shopping. He ended up buying sixteen video games, but only nine of them worked. How many bad games did he buy?  
A.  $16 + 9$                       B.  $16 - 9$                       C.  $16 \times 9$                       D.  $16 \div 9$
- 5) Janet was placing her spare change into stacks. One stack had two coins and the other had three. How many coins did she have total?  
A.  $2 + 3$                       B.  $3 - 2$                       C.  $2 \times 3$                       D.  $3 \div 2$
- 6) Amy had seventy-two extra nickels. If she put them into stacks with nine in each stack, how many stacks could she make?  
A.  $72 + 9$                       B.  $72 - 9$                       C.  $72 \times 9$                       D.  $72 \div 9$
- 7) On the last day of school only twelve students showed up. If three of them were checked out early, how many students were left?  
A.  $12 + 3$                       B.  $12 - 3$                       C.  $12 \times 3$                       D.  $12 \div 3$
- 8) Carol was practicing for a marathon. She practiced for four days, running five miles each day. How many miles did Carol run altogether?  
A.  $4 + 5$                       B.  $5 - 4$                       C.  $4 \times 5$                       D.  $5 \div 4$
- 9) Billy was playing basketball with his friend. Billy scored seven points and his friend scored nine points. How many points did they score total?  
A.  $7 + 9$                       B.  $9 - 7$                       C.  $7 \times 9$                       D.  $9 \div 7$
- 10) At the fair the roller coaster can hold thirty people total. If each car has six seats, how many cars are there?  
A.  $30 + 6$                       B.  $30 - 6$                       C.  $30 \times 6$                       D.  $30 \div 6$
