Name: _____

Solve each problem.

1) Tiffany baked five brownies, but needed eleven total for her party. If she used two spoonfuls of flour on each one, how much cups of flour does she still need?

2) April's discount flowers was having a sale where each rose was eight dollars. If April started with seven roses and had five roses left, how much money did she earn?

3) A chef needs thirteen potatoes for a meal. He has already cooked six. If each potato takes two minutes to cook, how long will it take him to cook the rest?

4) Tom invited twelve friends to a birthday party, but eight couldn't come. If he wanted to buy enough cupcakes so each person could have exactly two, how many should he buy?

5) A new building needed ten windows. The builder had already installed eight of them. If it takes six hours to install each window, how long will it take him to install the rest?

6) A worksheet had eight problems on it. If a teacher had eight worksheets to grade and had already graded two of them, how many more problems does she have to grade?

7) At a restaurant each adult meal costs $4 and kids eat free. If a group of eleven people came in and nine were kids, how much would it cost for the group to eat?

8) In a video game, each enemy defeated gives you four points. If a level has eight enemies total and you destroy all but six of them, how many points would you earn?

9) Vanessa earned two points for each bag of cans she recycled. If she had eight bags, but didn't recycle five of them, how many points would she have earned?

10) Victor had six video games but four of them weren't working. If he wanted to sell the working games for $6 each, how much money could he earn?
